

Deploying MATLAB[®]-based Applications

David Willingham
Senior Application Engineer

Data Analytics Workflow

Automate

What is *Application Deployment*?

Share MATLAB programs with people who do not have MATLAB

- Royalty-free distribution

Provide MATLAB apps or native files directly to other MATLAB users

Deployment Highlights

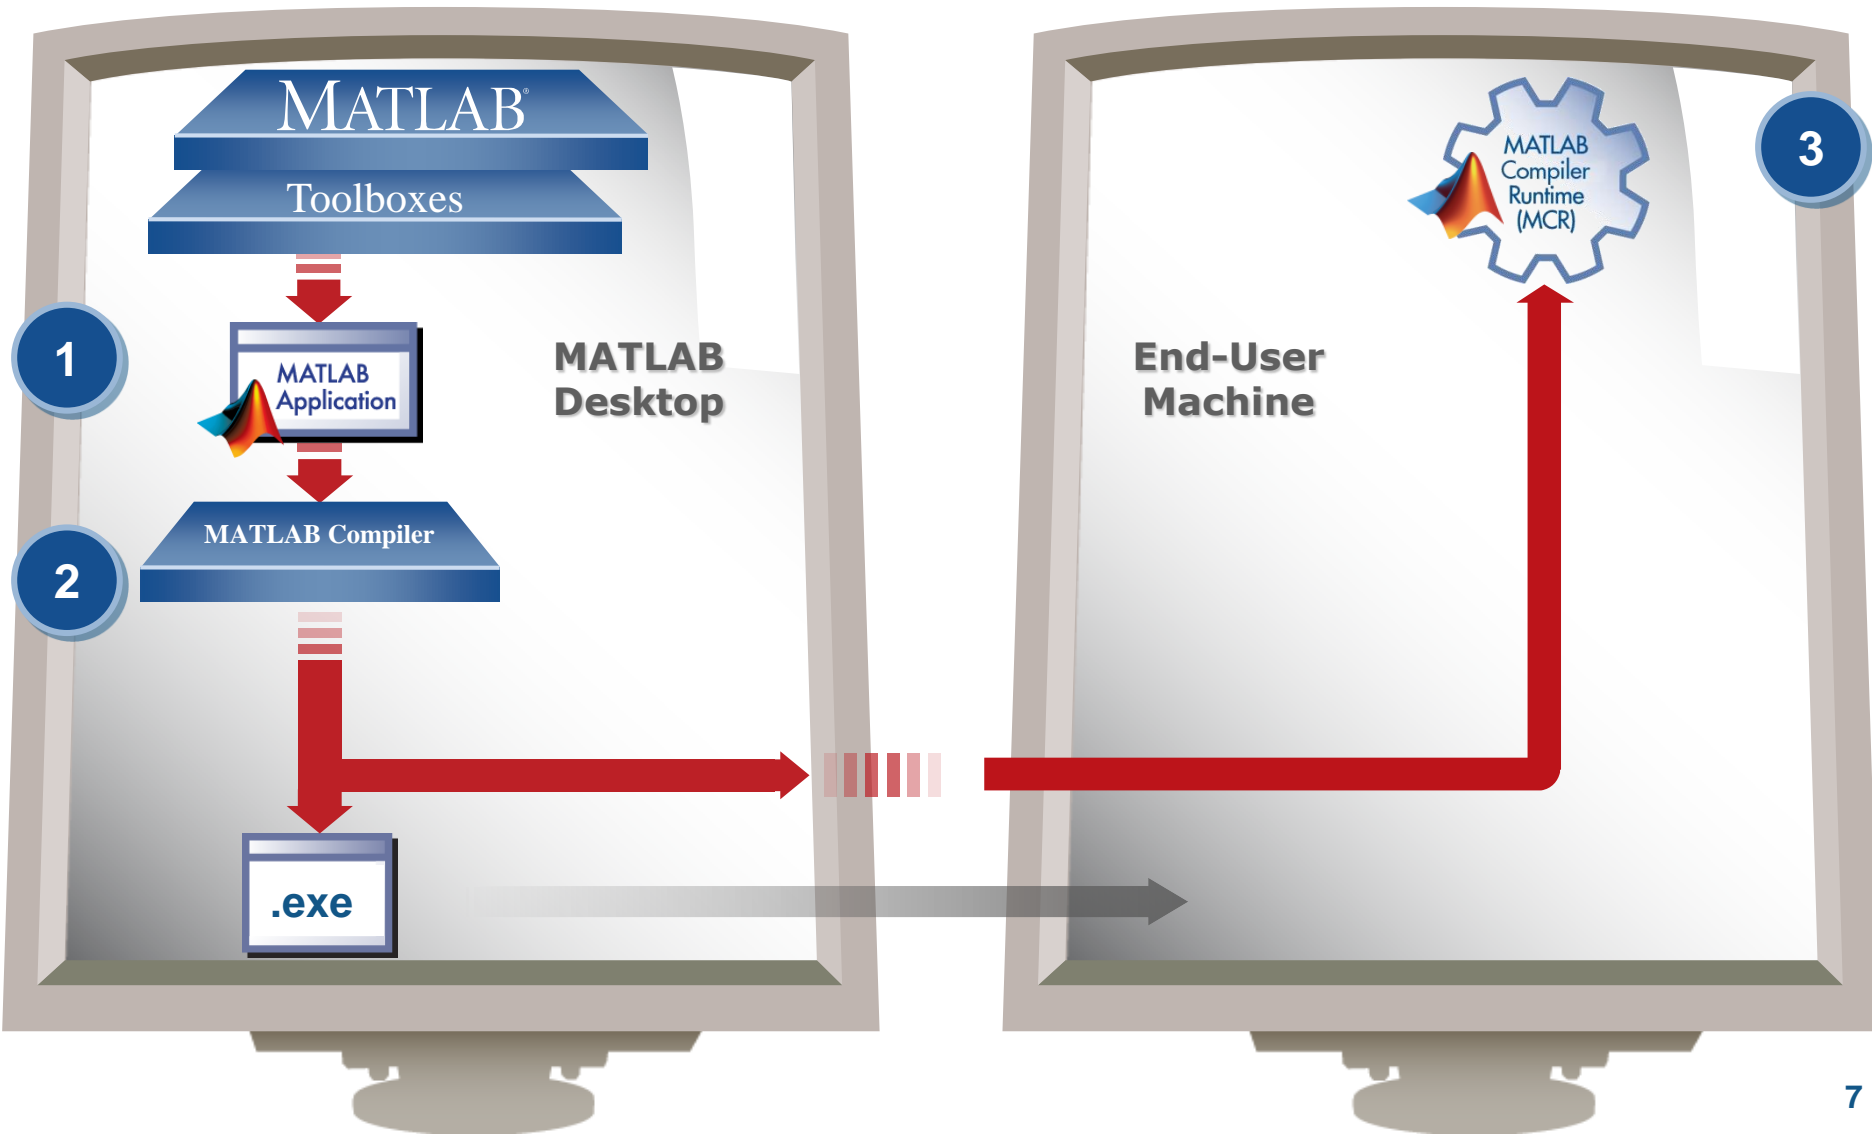

Deploying Applications with MATLAB

- Automated deployment
- Share applications with end users who do not need MATLAB
 - Stand-alone executables
 - Shared libraries
 - Software components
 - Encrypted
- Uses MATLAB Component Runtime Libraries

Deploying Applications with MATLAB

Capabilities of MATLAB Compiler™

- Package MATLAB programs as standalone applications or shared libraries
- Create professional software with customizable installers, icons, and splash screens
- Encrypt your intellectual property

A deployed application created with MATLAB Compiler

Typical Process for Standalone Applications

Application author

The screenshot shows the MATLAB Editor with a script named 'SolarAnalysisScript.m'. The code includes MATLAB functions for data processing and model creation. Overlaid on this is the 'MATLAB Compiler - SolarAnalysis.pg' window, which is used to configure the application's packaging options, including application type, runtime, and packaging options.

- 1.) Create MATLAB algorithms
- 2.) Define the user interface
- 3.) Package the application using MATLAB Compiler
- 4.) Give the application installer to someone

They will install the application ... and run it on their desktop

The screenshot shows the 'Installation Options' dialog box for 'SolarAnalysis', where the user specifies the installation folder. Below this is a preview of the application's user interface, which includes a list of 'Solar Data Files', a 3D surface plot of 'Solar Ratio' vs 'AvgPos*km' and 'delT', a line graph of 'Coefficient Value' vs 'Station Location', and a time-series plot of 'Ratio' vs 'Day Of Year' with 'Confidence Level' on the x-axis.

Customizations for your Applications

The screenshot shows the MATLAB Compiler interface for configuring an application. Key elements include:

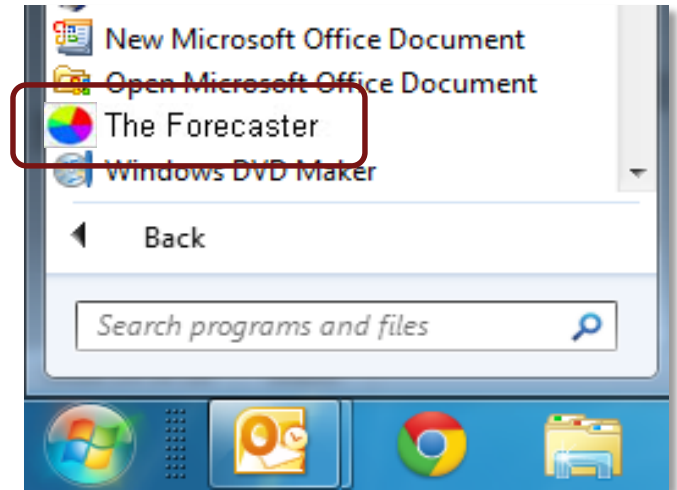

- Icons:** A dialog box on the left allows selecting an icon (48x48, 32x32, or 16x16) and options for 'Use mask' and 'Use border'.
- Runtime Downloaded from web:** A checkbox option in the 'PACKAGING OPTIONS' section, which is checked.
- Metadata:** A central 'Metadata' box with arrows pointing to fields for 'Application Name', 'Author Name', 'Email', 'Company', 'Summary', and 'Description'.
- Graphics for splash screen:** A callout box pointing to a 'Select custom splash screen' button next to a colorful abstract graphic.
- Graphics for installer:** A callout box pointing to a 'Select custom logo' button next to a similar colorful abstract graphic.
- Installed applications:** A callout box pointing to the bottom of the interface, indicating where installed applications are accessible from the Windows Start menu and Add/Remove Programs.

MATLAB Builder™ Products

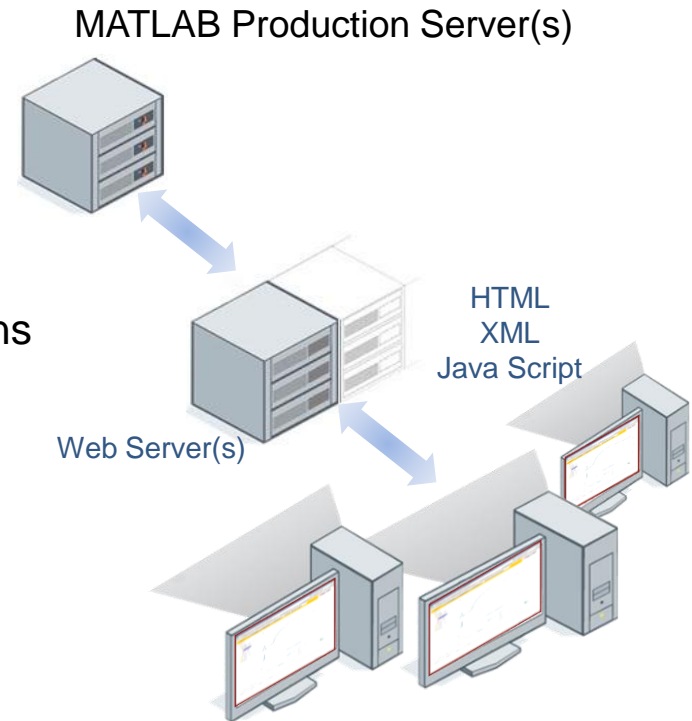

- Generate add-ins, components, and libraries to integrate with Microsoft Excel®, .NET, and Java™
- Support web technologies such as ASP.NET, SOAP, XML, JavaScript, and HTML
- Scalable applications via Java RMI and .NET remoting

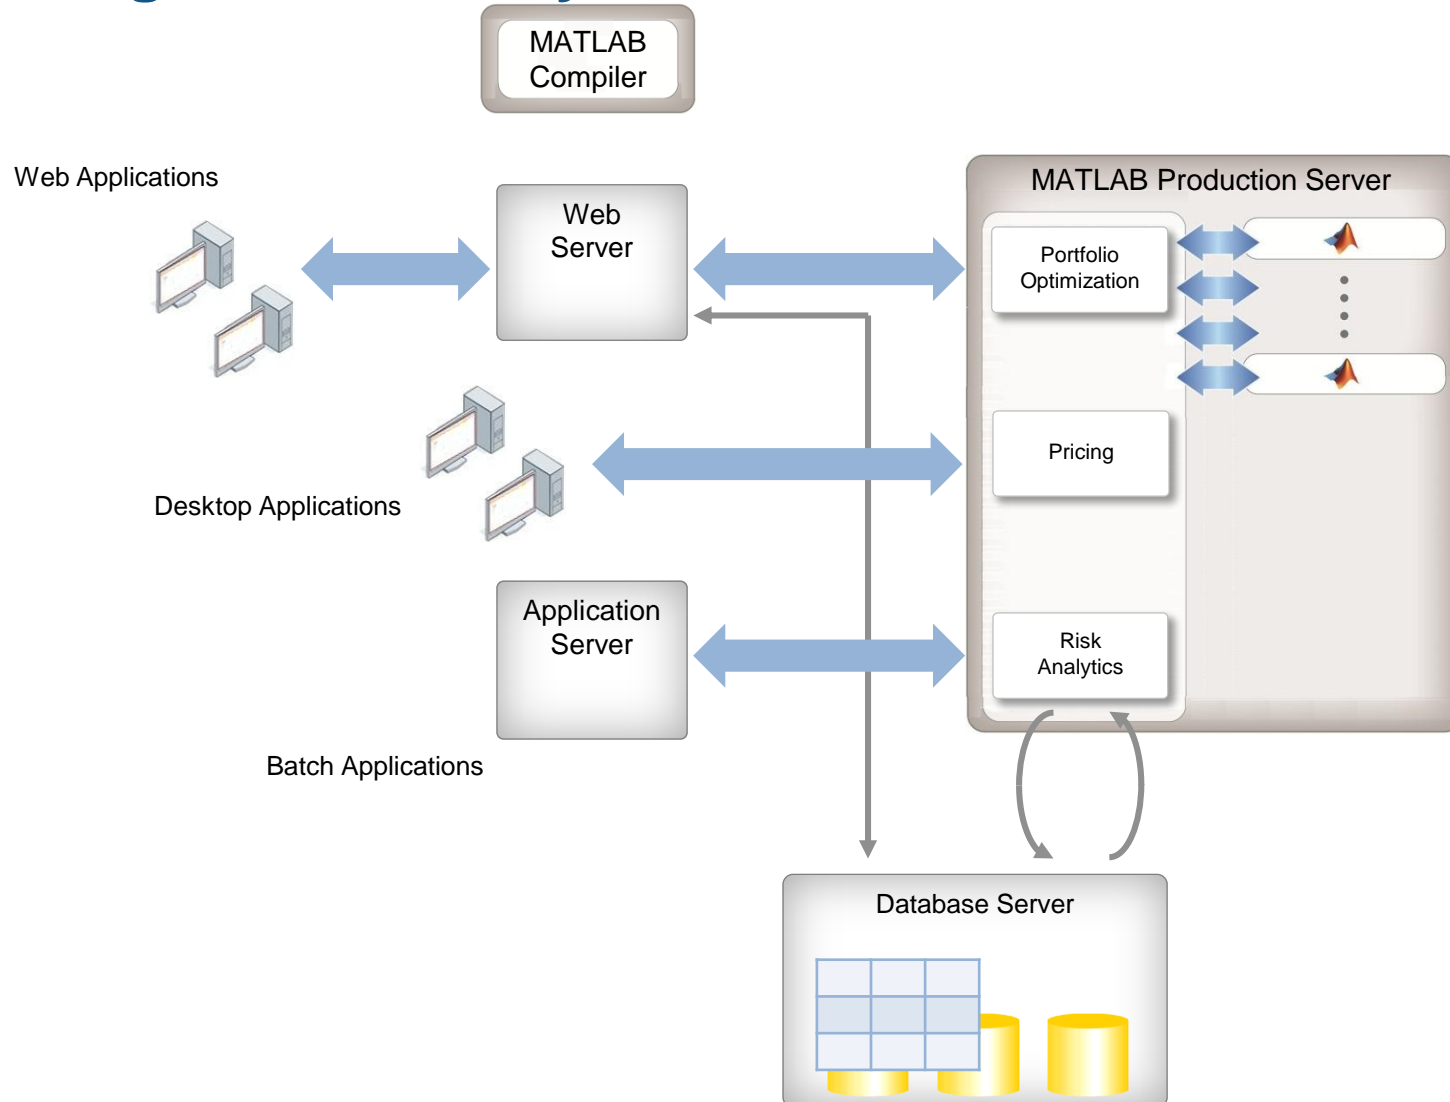

MATLAB Production Server

Scale up & centralize analytics

- Most efficient path for enterprise applications
- Deploy MATLAB programs into production
 - Manage multiple MATLAB programs and versions
 - Update programs without server restarts
 - Reliably service large numbers of concurrent requests
- Integrate with web, database, and application servers

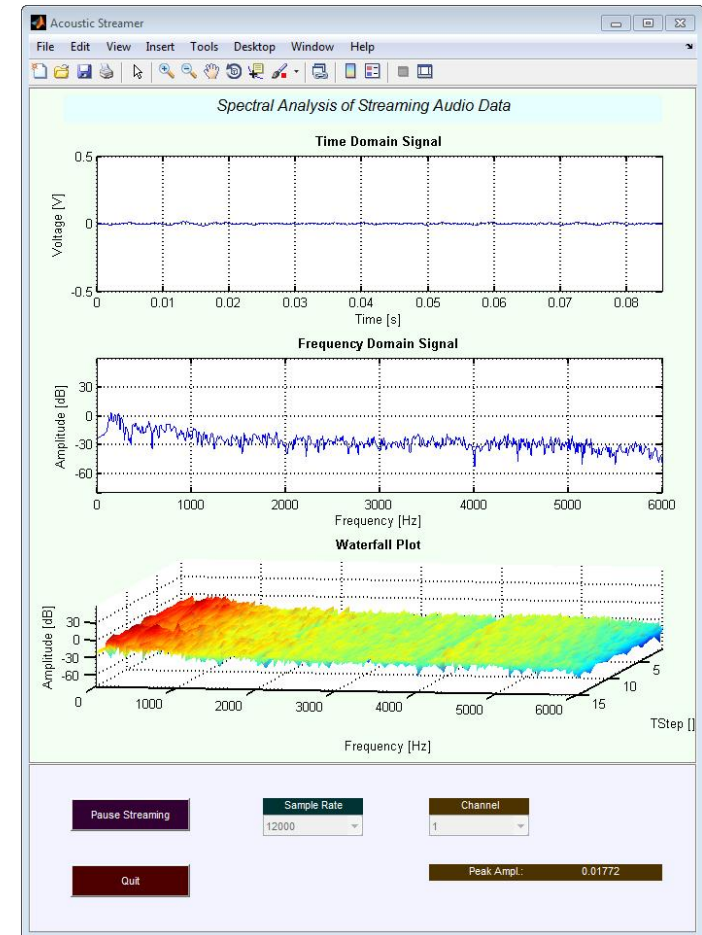

Centralized Analytics Integrate with IT systems

MATLAB Application Deployment

- Share MATLAB programs with people who do not have MATLAB
 - Royalty-free distribution
- Create both standalone applications and shared libraries
- Deploy to desktop, web, and enterprise applications

Thank you

Customer stories on following slides

UniCredit Bank Austria Develops and Rapidly Deploys a Consistent, Enterprise-Wide Market Data Engine

Challenge

Improve risk management operations throughout a multinational financial institution

Solution

Use MATLAB, MATLAB Compiler, and MATLAB Builder JA to build and rapidly deploy a consistent enterprise-wide data warehouse into J2EE Web Architecture

Results

- Development time reduced by 50%
- Risk management improved across the bank
- Operational, audit, and maintenance costs reduced

Zero-coupon yield curve plot in UniCredit Bank Austria's UMD environment.

“ With MATLAB, we can focus on business logic instead of implementation details. We can deploy an algorithm in a Java environment the same day, without any additional coding. This approach enabled us to cut our development time in half, if not more weeks, instead of months.”

**Peter W. Schweighofer
UniCredit Bank Austria**

HKM Optimizes Just-in-Time Steel Manufacturing Schedule

Manually reviewed plant schedule (left) and plant schedule automatically optimized with MATLAB genetic algorithms (right). The optimized schedule minimizes schedule conflicts (in red), meets delivery dates, and achieves the target utilization rate.

Challenge

Optimize a steel production process to enable consistent, just-in-time delivery

Solution

Use MATLAB, global optimization, and parallel computing to maximize throughput of more than 5 million tonnes of steel annually

Results

- Algorithm development accelerated by a factor of 10
- Optimization time cut from 1 hour to 5 minutes
- Customer satisfaction increased

“C++, Java, or third-party optimization solutions would have required us to spend significantly more time in development or to simplify our constraints. Only MATLAB provided the flexibility, scalability, development speed, and level of optimization that we required.”

**Alexey Nagaytsev
Hüttenwerke Krupp Mannesmann**

Halliburton Makes Oil Exploration Safer Using MATLAB and Neural Network Toolbox

Challenge

To improve the ability to detect detonation of explosives used to perforate the well bore

Solution

Use MathWorks products to develop an adaptive, predictive neural network filter that cleanses the detonation signal of contaminating noise from onsite machinery

Results

- Authentic simulation on the desktop
- An accurate, production-standard algorithm
- Dramatic time savings

“Using MATLAB and MATLAB Compiler, I can develop an application at least 100 times faster than I could with Visual Basic or C. The time we saved on the very first application that we wrote in MATLAB more than paid for the software.”

**Roger Schultz
Halliburton Energy Services**
